Z4C Datasheet

Overview

The Cisco Meraki Z4C teleworker gateway is an enterprise class firewall, VPN gateway and router. This device offers wireless connectivity with WiFi 6, five gigabit ethernet ports, including a built-in PoE-enabled port for VoIP phones and other PoE powered devices. The Z4C is designed to securely extend the power of Meraki cloud managed networking to almost any location. Configure your Dashboard Network

The following is a brief overview only of the steps required to add an Z4C to your network. For detailed instructions about creating, configuring and managing Meraki networks, refer to our Managing Dashboard Networks document. Additional resources can also be found via: documentation.meraki.com.

1. Login to http://dashboard.meraki.com. If this is your first time, create a new account.

2. Find the network to which you plan to add your Z4C or create a new network.

3. Add your Z4C to your network. You will need your Meraki order number (found on your invoice) or the serial number of each Z4C, which looks like Qxxx-xxxx-xxxx, and is found on the bottom of the unit. If a license key was purchased at the same time then you should have received it via email.

4. Go to the map / floor plan view and place each Z4C on the map by clicking and dragging it to the location where you plan to mount it.

Troubleshooting

Common Event Log Messages

Common event logs exist for wired, WiFi, and cellular events. As such, no specific Z4C event log entries are required at this time.

For more general information about navigating the Event Log and the types of Events that could be expected please check out our Event Log documentation.
